Han Shan Intelligence

BRAND SHEET · "ASCENT" · v1

A single Gaussian peak in axonometric projection — sixteen facets, the two sunward quadrants one tonal step darker so it reads solid rather than drawn. The teal line switchbacks up the flank: gradient ascent, and also how a trail climbs. The path ends at the summit with nothing marking it. Restraint reads as confidence: the mark states the climb, not the trophy.

THE FACET LADDER

The mesh does not scale. Three assets cover the range — never scale the 16-facet mark below 48 px, where the strokes collapse into grey.

48px+ · 16 facets

24–40px · 4 facets

<24px · 2 faces

SIZE	FACETS	FILE
48px and up	16	mark/mark-primary.svg
24–40px	4	mark/mark-32.svg
below 24px	2	favicon/favicon-16.svg

COLOUR

Ink · #16181A

Paper · #F5F3EE

Teal · #2F6B7A

Rule · #D8D4CA

Ink 60 · #4A4842

Rule and Ink 60 are structural, not decorative — the shade step is the entire lighting model. Teal appears only on the ascent path.

Both free on Google Fonts. The lockup SVGs call Archivo by name — **convert text to outlines before print.**

CLEAR SPACE & MINIMUMS

- Clear space = one quarter of mark height, all sides. Nothing enters it, including the trim edge.
- Mark alone 16 px / 5 mm, using the correct rung of the ladder.
- Horizontal lockup 120 px / 32 mm · stacked 96 px / 26 mm.

DON'T

- Scale the 16-facet mark below 48 px, or the 4-facet below 24 px.
- Recolour a face teal — teal is the path only.
- Add gradients or drop shadows; the shade step is the lighting model.
- Flip or rotate the projection — light comes from the upper left, always.

- Redraw the path straight. The switchbacks are the idea.
